

Generate added value through additional benefits: AEB professional services

Definition of Standard Business Processes

Business processes are the heart of each of AEB's application. They form the starting point and define the end goal. Description and frequent optimization of all processes are of key importance.

Our Service

Together with you, we define and document business processes relating to our software. This will be beneficial for you if you want to participate in a certification measure, validate your system environment or create test forms for change processes. In workshops, we recognize processes, classify them (core business process, subprocess, secondary process, etc.) and document them according to your requirements e.g. in UML.

Your benefit

- Qualified consultation on business processes from an external point of view but based on a profound knowledge of the relevant software
- Saving internal resources
- Experience in process definition and documentation

The options

Depending on the scope (number of PDs on-site), AEB employees will register and document business processes.

The requirements

For documenting the business processes, AEB employees must be permitted on-site. However, your cooperation is decisive for success.

The costs

Are invoiced according to expenditure. On average between 5 and 20 PDs are required.
