

Generate added value through additional benefits: AEB professional services

Quotes Maintenance

Application support is ensured continuously as needed to guarantee the agreed availability of the application.

Our service

The structure of agreements (quotes) of transport service providers is very different. Quotes are often designed very individually. Adjustments made by transport service providers to match the needs of their customers lead to modifications of zones, service types and the like.

This makes it difficult to have a standardized data transfer of the quotes, all the more because the structure of the agreements of the transport service providers may vary even for one and the same service provider (depending on the depot and the like).

Therefore, the entry of quotes into ASSIST4 is solved in a very flexible way. This flexibility makes it necessary to manually implement the quote structure into ASSIST4.

Your benefits

For the reasons mentioned above, creating quotes can be a very complex task. With our expertise, AEB undertakes the maintenance of quotes and will therefore relieve your shipping or IT department.

The service

You provide AEB with the quotes which you want to have entered, AEB then enters them into your test and productive system.

The requirements

Remote maintenance access to the ASSIST4 system.

The costs

Given that the complexity of quotes differs considerably, we will submit you an individual offer after having reviewed your sample quotes.
