## Annual Conversion of Commodity Codes

Application support is ensured continuously as needed to guarantee the agreed availability of the application.

## **Our service**

At each turn of the year (rarely during the year) modifications to the statistical commodity codes (8-digits) and customs tariff codes (11-digits) are made by the authorities. Codes can be added, deleted, replaced by others or changed. The codes are available in ASSIST4 in different master file data and should preferably be changed automatically. After the changeover, you receive a changeover log listing the remaining need for action which may be necessary.

## **Your benefits**

Following the changeover, AEB will update the material master. The import and/or export items, which will only be reported in the following year, will also be changed to the new commodity codes.

## **The service**

The function is included by default in all ASSIST4 installations and doesn't have to be licensed separately. In order to use the function for the changeover of commodity codes, a so-called history file is necessary, which AEB will provide to you.

## **The requirements**

None.

## **The costs**

The service costs EUR 260 for each provision of the history files.
