

Generate added value through additional benefits: AEB professional services

---

## Setting Up Clients

Application support is ensured continuously as needed to guarantee the agreed availability of the application.

## Our service

The AEB installations in the computer center run according to a client concept. This means, you can separate data for several companies or departments. This way subsidiaries can be set up as individual clients, for example.

It is possible to only provide users with their client's data. In addition, certain pre-defined settings are determined based on the client. The client is not of importance for satisfying legal customs requirements, even if data, for example authorizations, are stored with the selected client.

## Your benefits

Setting up clients is a constituent part of implementation and enhancement projects (in test and productive systems).

The benefits:

- Separating different companies/departments
- Rights concept
- Defining client-dependent settings

## The options

- Setting up an ASSIST4 client including connection to the Engine and an Engine client
- Setting up clients on AEB Engines for participants of ATLAS clearing/hosting (your system can be found in the customer data center or in the AEB data center)
- Setting up clients for an XPRESS application
- Setting up clients for solutions in the field of compliance
- Setting up clients for an EMCS application
- Setting up clients for a solution from the areas of O&P and Classification

## The requirements

For direct access to the client: Complying with system requirements.

## The costs

Prices for setting up clients in the particular solution areas amount to:

- Setting up an ASSIST4 client                      EUR 1000
- Engine client                                      EUR 600
- Support service connection existing ASSIST4 client to AES Engine                      EUR 300
- Setting up new EORI-Number for Import Filing ATLAS incl. BIN-Form                      EUR 300
