

Generate added value through additional benefits: AEB professional services

Escrow

The application base services ensure the technical operation of the individual application components.

Our service

AEB transmits the source code of your software, including all customizations made for you, to a certified escrow business.

In addition to secure data storage, AEB's escrow service includes verification by the custodian that the source code is fully functional, since source code has no value unless it can be read and executed. The process of creating the source code copy can be audited upon request.

The service includes two updates per year, each with a standard initial check.

Your benefits

Software escrow ensures the continuity of your business by granting you access to the software source code in the event that AEB ceases business operations or gives its express consent. This allows you to continue running ASSIST4. This is especially important if the AEB software supports your business-critical processes.

The options

You determine

- how in-depth the verification should be (various levels possible)
- the number of annual updates
- whether the process is audited

The requirements

To take advantage of this service, you must first license ASSIST4 or use ASSIST4 through the AEB data center. Second, you must designate a person who will take part in the verification and any requested audit, serve as beneficiary for receipt of the source code, and restore the software. Such a person should therefore be trained as an ASSIST4 system administrator. AEB offers appropriate training seminars. Learn more at www.seminare.aeb.de.

The costs

Two updates per year with initial verification:

- One-time fee: EUR 2,000
- Annual fee: EUR 1,000

We will be happy to provide you with a custom quote for additional services for each of the above options.
