

Generate added value through additional benefits: AEB professional services

Database Checkup

The basic database services such as administration, monitoring, patch management, data export and import, backup and restore are critical importance for proper functioning and a sound operation.

Our service

Our database experts may check the general state of your Oracle or MS SQL database upon request. They then decide at which intervals further checks should be performed. After each check you will receive a result statistic including an analysis but also suggestions on how to optimize your database.

Small modifications which can be performed during operation hours are included in the service. This may include for example expanding DB files or rotating log files.

Your benefit

Our database experts are knowledgeable about the interactions and interdependence existing between our software solutions and current databases. Take the burden off your DB administrator by having AEB regularly check up your database - ensuring high performance and secure operation.

The options

The following checks can be carried out during operation (working day between 8:00 a.m. and 6:00 p.m.) and are part of the DB checkup:

Operating system

- Disk space check
- Version check

Database

- Review of the database logs
- Review of the allocated space in DB files
- Assessment of resource limitations
- Verification of backup jobs
- Review of the management console
- Version check

Application

- Check for invalid objects
- Review of table and schema mapping

The requirements

Name a technical partner for AEB within your company (ideally the Application Manager).

The costs

- One-time check EUR 600
- Quarterly check (4 times a year) EUR 1,500 per year
- Monthly check (12 times a year) EUR 4,000 per year

Note: One-time support to carry out a database migration may be ordered separately.
